VoDaVi Backup Appliance from Barracuda:
Simplified backup and recovery that scales

Overview
Turnkey design and subscription-based offering simplifies business continuity and disaster recovery (BCDR) service delivery for physical, virtual, or multi-site environments.

Key Solution Advantages
- Built for rapid rollout of enterprise-class data protection services
- Integrated backup software, local storage, and remote storage that deploys in under an hour
- Fast recovery to prevent data loss and minimize application downtime
- Available as either an all-in-one physical appliance or a virtual appliance

Flexible Deployment
The VoDaVi Appliance from Barracuda is a flexible solution for protecting a variety of IT and application environments:
Cloud and hybrid protection
We can set up replication — files, folders, or images — from your sites to the Barracuda cloud, AWS S3, or a secondary physical or virtual appliance to safeguard against disasters. This deployment also enables Cloud LiveBoot, which lets you spin up VMware or Microsoft Hyper-V environments and access your virtual machines directly from the cloud.

Site-to-site protection
Site-to-site deployments let you back up data to a secondary location. Inline deduplication reduces bandwidth and storage demand, letting you save on infrastructure costs.

Multi-environment protection
The VoDaVi Appliance Backup Solution from Barracuda supports a variety of servers, clients, and networked storage platforms, as well as multiple OS platforms, hypervisors, premises-based applications, and cloud environments. This powerful backup solution includes all hardware, software, backup agents, and redundant storage needed to serve a variety of BCDR requirements.
